The HeartSine 500P Defibrillator

A **SEMI-AUTOMATIC** defibrillator that is operated by using two buttons. It features clear and simple voice prompts for users, with visual prompts to assist the rescuer in noisy or multi-lingual environments. In addition, the 500P features unique patient specific CPR feedback which instructs the user to push harder, faster, slower or reassures you that you're doing it right. This patented ICG technology has been correlated to a host of physiological parameters that have been recorded and tested during actual CPR applied to real cardiac arrest victims. This helps to provide the rescuer with simple instructions to maintain good, effective CPR - increasing the chance of saving a life and reducing the risk of neurological damage.

The HeartSine 350P Defibrillator

A **SEMI-AUTOMATIC** defibrillator that is operated by using two buttons. In addition, it provides audio prompts to users and metronome for CPR timing, and features visual representations of how to use the device.

The HeartSine 360P Defibrillator

A **FULLY-AUTOMATIC** defibrillator that is operated by pressing one button. It will deliver a shock after a countdown, which means the user doesn't have to press the shock button. Similarly to the 350P, it has CPR metronome audio prompts and visual explanations.
