WHY IS CARDIO PULMONARY RESUSCITATION (CPR) SO IMPORTANT?

The most frequent heart rhythm witnessed during an Sudden Cardiac Arrest (SCA) is ventricular fibrillation (VF), and the only treatment to overcome this is defibrillation.

For every minute that passes between collapse and defibrillation, the likelihood of surviving ventricular fibrillation (VF) SCA decreases by 10%.

However, when early and effective bystander CPR is provided, survival rates can double or triple. This highlights the importance of fast defibrillation coupled with effective CPR as key links in the chain of survival for SCA sufferers.

CPR QUALITY DIRECTLY RELATED TO THE PATIENT OUTCOME

WHAT CAN EFFECTIVE CPR DO?

- Prevents re-fibrillation (when a shock is successful)
- Maintains a shockable rhythm – increases the number of shocks which can be delivered
- Neurological outcome – helps prevent brain damage
- Limits cardiac and vital organ damage.

THE HEARTSINE DEFIBRILLATORS

HeartSine PAD 500P with CPR Feedback

A semi-automatic defibrillator that is operated by using two buttons. It features clear and simple voice prompts for users, with visual prompts to assist the rescuer in noisy or multi-lingual environments. In addition, the 500P features unique patient specific CPR feedback which instructs the user to push harder, faster, slower or reassures you that you're doing it right. This patented ICG technology has been correlated to a host of physiological parameters that have been recorded and tested during actual CPR applied to real cardiac arrest victims. This helps to provide the rescuer with simple instructions to maintain good, effective CPR – increasing the chance of saving a life and reducing the risk of neurological damage.

HeartSine PAD 350P

A semi-automatic defibrillator that is operated by using two buttons. In addition, it provides audio prompts to users and metronome for CPR timing, and features visual representations of how to use the device.

HeartSine PAD 360P

A fully-automatic defibrillator that is operated by pressing one button. It will deliver a shock after a countdown, which means the user doesn't have to press the shock button. Similarly to the 350P it has CPR timing audio prompts and visual explanations.

KEY CONSIDERATIONS WHEN PURCHASING A DEFIBRILLATOR

Semi-automatic vs fully-automatic

Both semi and fully automatic defibrillators are equally as effective, simple and safe to use, with voice prompts guiding you through the whole rescue process.

With a semi-automatic defibrillator, the device prompts the rescuer to press the shock button if one is advised. This provides the rescuer with complete control over delivering the shock.

Some may prefer this as it allows the rescuer to ensure nobody is touching the patient before the shock is delivered, which means there is no risk of harming anyone if there is contact. It could also reduce the effectiveness of the shock that is delivered to the patient.

A fully-automatic defibrillator is designed to give a shock automatically, if needed, without the rescuer having to push a button.

As soon as the pads are applied to the patient's chest, the AED will analyse the heart rhythm and deliver a shock if necessary, without the need for human intervention. This means it is important to make sure no one is touching the patient when the shock is delivered.

Assessing lifetime costs

The cost and shelf life of replacement consumables is an important consideration when looking at the total investment required (over the defibrillator's warranty period).

The HeartSine defibrillators have a unique Pad-Pak which is a combined unit of both the battery and electrodes, which means there is a considerable cost benefit when it comes to the lifetime cost of your device.

How to calculate;

(COST OF DEFIBRILLATOR + COST OF REPLACEMENT CONSUMABLES OVER OWNERSHIP PERIOD) / WARRANTY PERIOD (HeartSine is 8 years) **/ NUMBER OF DEVICES**

It is important to evaluate the lifetime cost of potential investments when comparing different defibrillator models and manufacturers. Defibrillators have a range of warranty periods as well as consumables costs and shelf life.

FIRST AID KITS & KIT REFILLS

SAFETY FIRST AID

AeroKit™ British Standard First Aid Kit – Weatherproof Case (available in 3 sizes)

Providing an excellent solution for smaller workplaces, our AeroKit™ with Surefill™ programmes offer convenient restocking of first aid consumables in a cost-effective way. The AeroKit™ with Surefill™ British Standard First Aid Kits include a weatherproof case and is designed to support employees in working environments.

This AeroKit™ with Surefill™ kit is fully compliant with British Standard BS 8599-1:2019 Workplace First Aid Kit requirements and is closely aligned with the safety needs of modern-day workplaces. Each AeroKit™ with Surefill™ British Standard Workplace First Aid Kit contains a variety of essential items from our extensive range of medical products including AeroPlast™, AeroBurn™, AeroWound™, AeroBand™, and AeroRescue™. These items are stored and organised in a highly visible portable weatherproof case with handles, for convenient storage and transportation in cases of injury or emergency and easy access to the items inside. The weatherproof case provides vital protection in environments with water, dust, and other demanding conditions.

This package includes an AeroKit™ Wall Bracket for mounting the kit on walls in visible locations. A handy AeroGuide™ first aid manual is included with every Surefill™ British Standard First Aid Kit with Weatherproof Case.

Surefill™ British Standard Kit REFILL (available in 3 sizes)

The Surefill™ Refill programme provides solutions for workplaces that need to maintain and manage first aid kits to ensure they are compliant with HSE regulations. Our solution offers users quick and easy restocking of first aid consumables, ensuring first aid kits are always up-to-date with products. As well as having economic benefits, Surefill™ also offers a level of environmental sustainability. The programme offers workplaces the opportunity to refill their first aid kits instead of buying everything again.
